

Goodcabs Performance Analysis Report

Executive Summary

This analysis evaluates Goodcabs' performance across 10 tier-2 Indian cities using trip volume, revenue, pricing, customer ratings, repeat passenger behavior, demand seasonality, and target achievement metrics.

Key findings indicate that Jaipur is the strongest market in terms of revenue and trip volume, while Surat and Lucknow exhibit the highest customer retention despite relatively poor ratings. Demand patterns reveal a clear distinction between tourism-oriented cities and commuter-oriented cities, suggesting different growth and partnership strategies.

1. Trip Demand Analysis

Top Performing Cities by Trip Volume

City	Total Trips
Jaipur	76,888
Lucknow	64,299
Surat	54,843

These three cities account for a substantial share of network demand and should be treated as strategic growth markets.

Key Insight

Jaipur alone contributes over one-third of total company revenue, indicating strong market dominance but also creating revenue concentration risk.

Lowest Performing Cities by Trip Volume

City	Total Trips
Mysore	16,238
Coimbatore	21,104
Visakhapatnam	28,366

Key Insight

Low trip volume does not necessarily indicate poor service quality. Mysore, despite having the lowest trip volume, maintains some of the highest customer ratings in the network.

2. Pricing and Revenue Analysis

Highest Average Fare per Trip

City	Avg Fare	Avg Distance	Revenue/km
Jaipur	₹483.92	30.02 km	₹16
Kochi	₹335.25	24.07 km	₹13
Chandigarh	₹283.69	23.52 km	₹12

Insight

Jaipur operates as a premium market with both the highest fare realization and longest trip distances.

Potential reasons include:

- Airport transfers
 - Tourism-driven travel
 - Longer inter-city journeys
-

Revenue Contribution by City

Rank	City	Revenue Contribution
1	Jaipur	34.39%
2	Kochi	15.71%
3	Chandigarh	10.22%

Insight

Revenue is highly concentrated in Jaipur, increasing business risk if demand weakens in that market.

3. Customer Satisfaction Analysis

Highest Rated Markets

New Passengers

- Jaipur (8.99)
- Kochi (8.99)

Strong Overall Markets

- Jaipur
 - Kochi
 - Mysore
 - Visakhapatnam
-

Lowest Rated Markets

Repeat Passengers

City	Composite Rating
Vadodara	6.23
Surat	6.24
Lucknow	6.24

Insight

Repeat passengers consistently rate the service lower than new passengers.

This suggests:

- Service inconsistency
 - Deteriorating customer experience
 - Rising expectations among existing customers
-

4. Demand Seasonality Analysis

Peak Demand Months

Most cities experience peak demand between February and May.

Examples:

- Jaipur → February
- Kochi → May
- Lucknow → February
- Surat → April

Low Demand Months

June emerges as the weakest month for several cities:

- Jaipur
- Kochi
- Indore
- Vadodara

- Coimbatore

Insight

Demand appears influenced by seasonality, weather patterns, tourism cycles, and local events.

5. Weekday vs Weekend Demand Analysis

Tourism-Oriented Cities

City	Weekend Share
Mysore	60.44%
Jaipur	57.74%
Kochi	54.80%

Interpretation

These cities likely attract leisure and tourist travel.

Commuter-Oriented Cities

City	Weekday Share
Lucknow	77.17%
Surat	68.91%
Vadodara	63.42%

Interpretation

Demand is driven primarily by work-related commuting and daily transportation needs.

6. Repeat Passenger Analysis

Highest Repeat Passenger Rates

City	Repeat Rate
Surat	42.63%
Lucknow	37.12%

Lowest Repeat Passenger Rates

City	Repeat Rate
Jaipur	17.43%
Mysore	11.23%

Key Insight

Surat and Lucknow maintain high repeat usage despite low ratings.

This suggests customer dependence on the service rather than strong customer satisfaction.

Potential reasons include:

- Daily commuting needs
- Limited alternatives
- Route convenience

Repeat Trip Frequency Insights

Across the network, the majority of repeat passengers fall within the 2–4 trip range.

High-frequency users (6–10 trips) are concentrated in:

- Lucknow
- Surat
- Vadodara

This further supports the commuter-city hypothesis.

7. Monthly Target Achievement Analysis

Best Performing City: Mysore

Achievements:

- Consistently exceeded trip targets
- Consistently exceeded rating targets

Recommendation

Study operational practices in Mysore and replicate successful strategies across other cities.

Strong Revenue City: Jaipur

Achievements:

- Exceeded trip targets consistently
- Exceeded rating targets consistently

Challenge:

- Frequently missed new passenger acquisition targets

Recommendation

Increase customer acquisition campaigns, referral programs, and digital marketing efforts.

Underperforming Markets

Surat

Issues:

- Missed rating targets every month
- Frequently missed trip targets

Vadodara

Issues:

- Missed nearly all trip and rating targets

Lucknow

Issues:

- Missed rating targets consistently
-

8. Secondary Research Analysis

Tourism Impact Assessment

Potential Insight:

Jaipur, Kochi, and Mysore likely benefit from tourism-driven demand.

Strategic Recommendations

Priority 1: Improve Service Quality

Target Cities:

- Surat
- Lucknow
- Vadodara

Actions:

- Driver training
 - Service quality audits
 - Customer complaint analysis
-

Priority 2: Expand Tourism Partnerships

Target Cities:

- Jaipur
- Kochi
- Mysore

Potential Partners:

- Hotels
 - Resorts
 - Tourism operators
 - Airports
-

Priority 3: Develop Corporate Mobility Programs

Target Cities:

- Surat
- Lucknow
- Vadodara

Potential Partners:

- IT parks
 - Business districts
 - Manufacturing zones
 - Universities
-

Priority 4: Reduce Revenue Concentration Risk

Current Situation:

Jaipur contributes approximately 34% of total revenue.

Recommended Actions:

- Accelerate growth in Kochi
- Accelerate growth in Surat
- Accelerate growth in Lucknow

This will improve diversification and reduce dependence on a single market.

Conclusion

The analysis reveals two distinct city segments:

Tourism-Focused Markets

- Jaipur
- Kochi
- Mysore

Characteristics:

- Higher fares
- Strong weekend demand
- Lower repeat rates

Commuter-Focused Markets

- Surat
- Lucknow
- Vadodara

Characteristics:

- High repeat rates
- Strong weekday demand
- Lower customer ratings

Goodcabs should adopt differentiated growth strategies for each segment while prioritizing service quality improvements in high-retention but low-satisfaction cities.
